

Strapi v4 to Strapi 5 breaking changes

The present page lists all the breaking changes introduced in Strapi 5. Breaking changes are grouped into topic-related categories, and for each line in the following tables line you will find:

- a short description of the breaking change,
- and 2 other columns, "Affects plugins" and "Handled by codemods", that sum up whether the breaking change also affects plugins and whether the breaking change is automatically handled by a codemod from the [upgrade CLI tool](#).

You can click on the description of any breaking change in the following tables to jump to the corresponding page with more details.

💡 Tips

- To view a full list of available codemods, run the `npx @strapi/upgrade codemods ls` command in your terminal.
- To have a deeper look at the code executed by the codemods, head over to the [list of codemods](#) in the GitHub repository.
